03 - Authority

1. Purpose

This document defines the **authority** given to each **role** in managing and using the hospital's electronic patient information system. It ensures that each role can perform its tasks within its **assigned authority**.

2. Authority by Role

2.1 Hospital Management

- **Approve** the general **governance rules** for the system.
- **Make decisions** about the overall **management** of the system.

2.2 System Administrator

- **Create**, **update**, and **disable user accounts**.
- **Apply approved access permissions** to user accounts.
- **Perform technical tasks** needed to manage the system within the **approved authority** and decisions set by Hospital Management.

2.3 Doctors

- **View** patient information and **medical records**.
- **Enter** and **update medical information** within their work duties and **assigned permissions**.

2.4 Registration Staff

- **Create patient records**, and **enter** and **update patient information**.
- **Add** and **update appointments** within their work duties and **assigned permissions**.
- They are not allowed to **view medical records** unless there is an **approved work need**.

2.5 Cloud Service Provider

- **Manage cloud resources and services** used to host the system.
- **Perform operational tasks** allowed under the agreed **service scope** with the hospital.

3. Scope

These **authorities** apply only to the electronic patient information system defined in the project scope and must follow the **approved rules and decisions** for each role.
