04 - Decision-Making Authority

1. Purpose

This document defines the types of **decisions** each **role** is allowed to make regarding the hospital's electronic patient information system, based on its **responsibilities** and **assigned authority**.

2. Decision-Making Authority by Role

2.1 Hospital Management

Allowed Decisions:

- Make decisions about the overall **management** of the system.
- **Approve** the general **governance rules** for the system.

Reason: Hospital Management is responsible for the overall **oversight** of the system and has the authority to make decisions about its general management.

2.2 System Administrator

Allowed Decisions:

- Make **technical operational decisions** within the approved authority.
- Decide which technical actions are needed to manage **user accounts** and apply approved permissions.

Reason: The System Administrator is responsible for the technical side of the system and user account management. The role can carry out technical tasks within the approved rules and decisions but cannot approve governance rules or grant access permissions on its own authority.

2.3 Doctors

Allowed Decisions:

- Make decisions about handling patient information and **medical records** within their work duties and **assigned permissions**.

Reason: Doctors are responsible for using the system to handle patient information and medical records as part of their work.

2.4 Registration Staff

Allowed Decisions:

- Make **operational decisions** about registering patient information and managing appointments within their work duties and **assigned permissions**.

Reason: Registration Staff are responsible for registering patient information and managing appointments. Their responsibilities do not include technical or general management decisions about the system.

2.5 Cloud Service Provider

Allowed Decisions:

- Make **operational decisions** about cloud hosting services within the agreed **service scope**.

Reason: The provider is responsible for managing cloud hosting services according to the agreement with the hospital.

3. Scope

Each role's **decision-making authority** applies only to the electronic patient information system defined in the project scope and must remain within the role's approved responsibilities and authority.
