# 02 - Roles and Responsibilities

## 1. Purpose

This **document** defines the main **roles** involved in **managing** and using the hospital's electronic patient information system and explains the responsibilities of each role.

## 2. Roles and Responsibilities

### 2.1 Hospital Management

**Responsibilities:**

- **Oversee** the electronic patient **information system**.
- Ensure that **system management supports** the hospital's **objectives** and the system's objectives.
- **Approve** the **general rules** for managing the system.

### 2.2 System Administrator

**Responsibilities:**

- **Manage** the **technical aspects** of the **system**.
- **Create**, **update**, and **disable** user **accounts**.
- **Apply access permissions** according to the **approved rules and decisions.**

### 2.3 Doctors

**Responsibilities:**

- **Use** the **system** to view and manage **patient information** and **medical records** within **their work** duties and assigned permissions.
- **Report** any **risks** or **problems** related to the system.

### 2.4 Registration Staff

**Responsibilities:**

- **Register patient information** and **manage appointments** within their work duties and assigned permissions.
- **Report** any **risks or problem**s related to the **system**.

### 2.5 Cloud Service Provider

**Responsibilities:**

- **Provide** and **manage** the **cloud services** used to host the system.
- Meet the responsibilities agreed with the hospital within the service agreement.

## 3. Scope

These roles and responsibilities apply **only** to the **electronic patient information system** covered by this project, not to the hospital as a whole.
