Project Context

Project Title: Applying **GRC Risk Managemen**t to an Electronic Patient Information System at a Fictional **Private Hospital** in Jordan

1. Scenario Description

Assume a fictional **private hospital** in Jordan that uses an **electronic system** to manage patient information, basic medical records, and appointments.

2. System Functions

- **Registering patient** information.
- Managing **appointments**.
- **Storing** and **retrieving** medical records.
- Managing **user accounts** and access permissions.

3. System Environment

- The **system** and its **database** are hosted by an **external cloud service provider.**
- The hospital's **system administrator** manages **user accounts** and **access permissions.**
- The system is used by **doctors**, **registration staff**, and the **system administrator.**

4. Project Objective

To apply the **GRC concepts** and tools studied to **manage risks associated** with the electronic system, starting with defining objectives and identifying risks, followed by risk assessment, risk treatment, documentation, and monitoring.

5. Scope of Application

The project focuses on the specified electronic system and its functions. It does not include assessing all hospital systems or operations.
